

## Importing Preset Into Lightroom

1. Open the Lightroom app on your mobile device and tap **Add Photos**.
2. Navigate to the location where you saved the DNG file and select the one that you wish to import.
  - If you are using an iOS device, tap "**From Camera Roll**" to proceed.
  - If you are using an Android device, tap "**Gallery/Folder**".
3. If you saved the DNG files on cloud storage, tap "**From Files**" on iOS devices and the specific cloud storage folder on Android devices.

**Note:** As preset files are DNG files, you may see a "Cannot Load File" error message when you open the file. Continue following the steps to import DNG presets to your **Lightroom Library**.

4. Once you open the file that you imported, tap the **three-dot icon** on the upper-right corner of the screen.
5. Tap **Create Presets** and add a name for your newly imported preset.
